

How to Spot SCAMS

A **scam** is a dishonest or illegal plan to trick people to get money or something from them. It usually happens when someone lies or promises something false to make others believe them and give money or personal information.

Phishing is when someone tricks you by pretending to be a real company or person, usually through an email, message, or fake website. The goal is to steal your personal information like passwords, bank details, or credit card numbers. Phishers often make their messages look real and urgent to make you act quickly.
