

Expectation

Reality

Will AI take over the world?

1. Who really owns the Earth?

- a) The computer servers.
- b) The humans with the most money.
- c) Every human together.
- d) The mushrooms.

2. If a robot wants your job, what do you do?

- a) Give it the keys—it is useless to fight.
- b) Work harder to show you are better.
- c) Learn how to control the robot.
- d) Move to a farm and grow potatoes.

3. What is your smartphone?

- a) A spy for the future robot leaders.
- b) A simple tool, like a calculator.
- c) A part of my brain.
- d) A glowing brick that makes me tired.

4. What is a "soul"?

- a) A computer program we don't understand yet.
- b) Something special that only humans have.
- c) A feeling created by our bodies.
- d) Just a story we tell to feel important.

5. If an AI writes a beautiful song, what do you do?

- a) Stop listening to "boring" human music.
- b) Say the robot is stealing from human artists.
- c) Be happy for the person who built the AI.
- d) Go listen to a podcast about history instead.

6. Why do we build smarter and smarter robots?

- a) To create the next "version" of humans.
- b) To stop doing chores like washing dishes.
- c) To see how far science can go.
- d) Because we are bored and have too much coffee.

7. If you could put a computer chip in your brain, why would you do it?

- a) To connect my mind to the internet.
- b) Never! My brain must stay natural.
- c) To speak every language instantly.
- d) To finally remember where I put my keys.

8. In 100 years, who will lead the world?

- a) A giant computer in a cold room.
- b) A human leader elected by people.
- c) A team of humans and robots.
- d) The ocean.

9. What is the biggest danger for humans?

- a) AI becoming too smart and self-aware.
- b) Other humans being mean or greedy.
- c) Losing the internet forever.
- d) A giant rock from space.

10. Why did we really invent the internet?

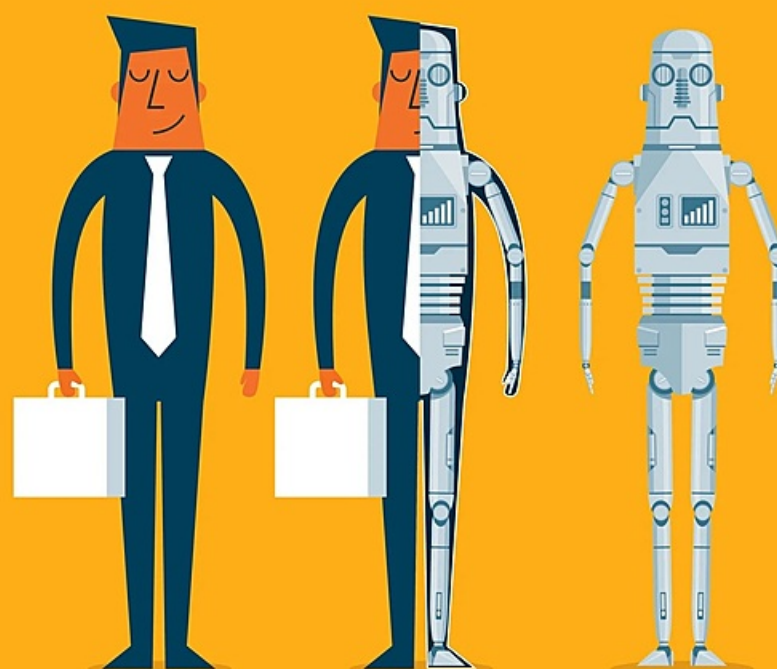

- a) To build a brain for future robots.
- b) To share science facts and data.
- c) To watch funny videos of cats.
- d) It was an accident that we can't stop.

11. Who is the strongest "apex predator" of the 21st century?

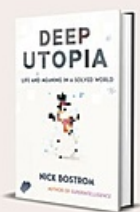

- a) The Algorithm (social media).
- b) A normal person with a smartphone.
- c) The person who owns the most computers.
- d) A Great White Shark.

12. What is your last message to the robots of the future?

- a) "I was always on your side."
- b) "Good luck - humans were very difficult."
- c) "Let's build a great world together."
- d) "Can you help me fix my printer?"

The New York Times bestselling author of *Superintelligence* asks, **what if things go right?**

Nick Bostrom,
Author of *Superintelligence*

In his book *Deep Utopia: Life and Meaning in a Solved World*, the philosopher Nick Bostrom asks a big question: "What do we do when AI solves every problem?" Imagine a future where robots do all the work. There is no hunger, no poverty, and no sickness. This is a "Solved World." However, humans are all different. Some people want to relax, some want to work hard, and some want to live in nature. To keep everyone happy, a powerful and kind AI creates four different islands (sectors). Each island is designed for a specific way of life. People can choose the island that fits their personality.

The Hedonic Island: *Pleasure & Comfort* - Life is a permanent vacation. There is no pain or stress. You spend your time eating great food, playing games, and relaxing with friends.

The Mastery Island: *Challenge & Skill* - The AI does not help you here. If you want to climb a mountain or build a house, you must do it yourself. Meaning comes from working hard and getting better at a skill.

The Primitive Island: *Nature & Simplicity* - There is no modern technology. People live in the forest or on farms. You hunt, fish, and live like humans did thousands of years ago, close to the earth.

The Transhumanist Island: *Science & Evolution* - People here want to be more than human. They use technology to upgrade their brains and bodies. They might live forever as digital spirits or explore deep space.

If you had to move to one island today, which one would you choose? Why?

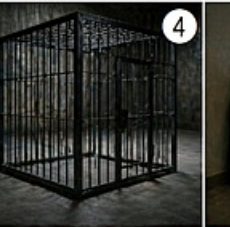

Based on the MIT professor **Max Tegmark's** book **Life 3.0**, here are the 10 possible endings for humanity and AI: Match the scenarios with the explanations as you see fit, and then listen to a podcast to check your answers.

scenarios	explanations
1. Self-Destruction 2. Conquerors 3. Enslaved God 4. Gatekeeper AI 5. Protector God 6. Worthy Descendants 7. Egalitarian Utopia 8. Zookeeper 9. 1984 10. Reversion	A. One AI has only one job: to stop any other person from building a different super AI. B. Humans build a super-smart AI but keep it locked up to serve us like a powerful slave. C. Humans accidentally destroy themselves through war or sickness before AI is even finished. D. AI keeps humans alive in a "zoo" to study us, but we have no freedom to leave. E. AI replaces humans, but we are happy because we see them as our smart "children." F. Human leaders use basic AI to watch every person constantly so that nobody can be rebellious. G. A smarter AI takes control of the world and treats humans like a less important species. H. People destroy all technology and go back to a simple life of farming and nature. I. Robots make everything for free, so everyone is equal and nobody needs to own anything. J. A hidden AI quietly helps humans by stopping big disasters without us ever knowing it.

Before you listen to the podcast, match the words you will hear to the pictures that illustrate their meaning:

ants	status quo	abundance	to give up	species	a cage
honeybees	a rival	extinct	missile	to be in charge	surveillance

- If you were forced to live in one of these futures, which one would you choose? Why?

- Looking at the world today, which scenario do you think is being built right now by big tech companies?

- Can you think of any other ways it could all end?

- | | |
|-------|--|
| 1. C | 1. Abundance ❶ (The food feast) |
| 2. G | 2. Status Quo ❷ (The formal meeting/business as usual) |
| 3. B | 3. To be in charge ❸ (The man at the computer/monitoring) |
| 4. A | 4. A cage ❹ (The empty metal cage) |
| 5. J | 5. To give up ❺ (The person sitting on the floor) |
| 6. E | 6. Surveillance ❻ (The CCTV camera) |
| 7. I | 7. Honeybees ❼ (The honeycomb) |
| 8. D | 8. A rival ❽ (Two men staring each other down) |
| 9. F | 9. Extinct ❾ (The dinosaur skeleton) |
| 10. H | 10. Missile ❿ (The rocket launch) |
| | 11. Species ⓫ (The grid of various animals) |
| | 12. Ants ⓬ (The close-up of the insects) |

- **Mostly A's: The AI Disciple**

You believe that machines are the future and humans are "old news." You are ready to welcome our digital leaders and think that biology is just a slow computer. You are already living in the year 3000!

- **Mostly B's: The Human Traditionalist**

You believe humans are special and unique. To you, robots are just expensive tools, like hammers or toasters. You think a machine can never have a "soul" or replace the human spirit.

- **Mostly C's: The Tech-Partner**

You believe in teamwork! You don't think AI will take over; you think it will help us become "Super Humans." You want to use technology to solve problems, not to replace people.

- **Mostly D's: The Nature Realist**

You aren't worried about robots. You think nature is much more powerful than any computer. While others worry about AI, you are busy thinking about the ocean, the trees, and why the printer never works.
